Launch of Marine Research Training Manual

Exercises in Marine Biodiversity and Ecology: *A Training Manual using the Intertidal Habitats of the WIO Region*

The Western Indian Ocean Marine Science Association (WIOMSA) is delighted to announce the upcoming release of a new training manual, **Exercises in Marine Biodiversity and Ecology: A Training Manual using the Intertidal Habitats of the WIO region**. The manual has been co-authored by Jose Paula (University of Lisbon); Salomao Bandeira (University of Eduardo Mondlane); Daudi Msangameno (University of Dar es Salaam) and Henrique Queiroga (University of Aveiro).

This book addresses an urgent need

Deriving its content from several regional Marine Science for Management (MASMA) programme courses on scientific methodologies in marine ecology undertaken by WIOMSA in Mozambique, the manual is a comprehensive and integrated training resource to address the reference sources gaps for training in Marine Biodiversity and Ecology in the WIO.

The launch - 5th March 2021

To learn more about this manual, we invite you to participate in the online launch from **1500 – 1600** on **March 5, 2021** where you will learn more about the content and interact with the authors and other experts from the region and worldwide.
