

REPUBLIC OF KENYA

The 2009 Kenya Population and Housing Census

Counting Our People for the Implementation of Vision 2030

VOLUME II

Population and Household Distribution by Socio-Economic
Characteristics

August, 2010

FOREWORD

The Kenyan government has conducted decennial censuses since 1969, in addition to the earlier ones, notably in 1948 and 1962, as recommended by the United Nations Principles and Recommendations for census-taking worldwide. Thus, the country has been hailed as model for successful census-taking in the Sub-Saharan Africa region.

The 2009 Kenya Population and Housing Census (2009 KPHC) was the seventh census to be conducted since 1948 and the 5th since independence. It was conducted from the night of 24th/25th to 31st August 2009. The planning and execution of the 2009 KPHC was spearheaded by the Kenya National Bureau of Statistics (KNBS) on behalf of the Government of Kenya – in accordance with the Statistics Act 2006. The theme for the census was “*Counting our people for the implementation of Vision 2030*”. This theme was deemed pertinent in order to respond to the greater demands for statistical information for monitoring the implementation of Kenya’s current development goals and other global initiatives such as the Millennium Development Goals (MDGs). Thus, planning of the 2009 KPHC took cognizance of the need to collect a variety of information for monitoring the achievement of these goals.

The implementation of the 2009 KPHC was a costly venture, estimated at Kshs. 8.4 billion. The government funded over 95 percent of the entire budget from its own resources, thereby demonstrating its commitment to improving statistical data collection, analysis, and dissemination for informed decision-making.

Census being a massive statistical operation and an important national exercise, the Government ensured that its implementation incorporated the participation of all stakeholders, either directly or indirectly through various census committees and sensitization workshops, as well as through print and electronic media. Indeed, an effective communication campaign was mounted to create public awareness and mobilize national support for the process.

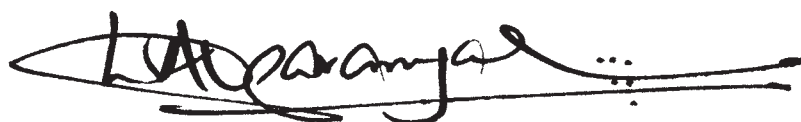

For the first time in the history of census-taking in Kenya, His Excellency the President declared a census/public holiday on the first day of the census (25th August 2009). The President further demonstrated his commitment to the process by being the first Kenyan to be enumerated, a gesture that was emulated by the Right Hon. Prime Minister and other dignitaries from the public and private sector.

Volume 1A of the series of preliminary reports presents the distribution of the enumerated population for each administrative unit (sub-locations, locations, divisions, districts, provinces) by sex, number of households, area size, and population density. The other reports in the series present distribution of enumerated population

by: political units (constituencies and counties); age and sex; and socio-economic characteristics. The results are tabulated for the 158 districts gazetted as at December 2008. Further work will be done, where necessary, to tabulate the results according to the current administrative units. It is also important to note the preliminary reports series present the very basic findings from the census for a general audience and users. More in-depth analytical reports on the various themes captured in the census will be compiled during the next sub-phase of the process.

The preliminary analysis of the data indicates that generally the 2009 KPHC data are complete and accurate. However, data from eight (8) districts, namely Mandera Central, Mandera East, Mandera West, Lagdera, Wajir East, Turkana Central, Turkana South and Turkana North, are anomalous, and exhibit population growth rates that deviate significantly from the patterns portrayed not only by the rest of the country but by their respective neighbouring districts as well. The Government, regardless, has decided to release the results as enumerated. However, the data will be assessed further using internationally acceptable procedures and suitable remedial measures undertaken. Meanwhile, the stakeholders and the public at large are advised to exercise caution while using the interim results for the affected districts.

On behalf of the Government I wish to thank the management and staff of the Kenya National Bureau of Statistics and other public officials as well as community leaders (especially village elders) and the private sector actors who have facilitated the census process, and the entire Kenyan public for their support and co-operation. I take this important opportunity to request all Kenyans and our development partners to use the results extensively and responsibly to steer socio-economic development in Kenya.

A handwritten signature in black ink, appearing to read 'Wycliffe Ambetsa Oparanya', with a long horizontal flourish extending to the right.

Hon. Wycliffe Ambetsa Oparanya, EGH, M.P.

Minister of State for Planning, National Development and Vision 2030

ACKNOWLEDGEMENT

The Government successfully conducted the Kenya Population and Housing Census 2009 (2009 KPHC) from the night of 24th /25th August, 2009 for a period of seven (7) days. Owing to the complexity and extensiveness of the census, it was methodically executed –in phases – to ensure logical sequencing and effective implementation of activities. The activities were classified into three phases; namely pre-enumeration, enumeration, and post-enumeration. The pre-enumeration phase started with the preparation of the project document followed by sustained resource mobilization in 2006. Other major activities during this phase included cartographic mapping, pilot census, development, finalisation and printing of instruments, and sensitisation of key stakeholders. The enumeration phase started in July 2009, with the recruitment and training of field personnel, including working out complex logistical arrangements for the actual enumeration, intense sensitization campaigns, and enumeration. The post-enumeration phase is currently underway and includes processing the data from the Post Enumeration Survey conducted in December 2009, the census data capture and processing and tabulation which has culminated in the preliminary reports, compilation of the thematic reports to begin soon, and further analysis and dissemination of the preliminary and thematic reports.

Thus, owing to the gigantic, strenuous and costly nature of the exercise, it was accomplished through concerted efforts of various organizations, institutions and individuals. Therefore, I wish to pay special tribute to all committees, institutions, and individuals who made it a success. Foremost I wish to extend special appreciation to the Census Steering Committee, co-chaired by Dr. Edward Sambili, the Permanent Secretary in the Ministry of State for Planning, National Development and Vision 2030, Mr. Francis Kimemia, the Permanent Secretary for Internal Security and Provincial Administration, and Mr. Njoroge Ndirangu, the Provincial Commissioner for Nairobi Area; and representatives of the ministries of Northern Kenya, Special Programmes, Livestock Development and Provincial Administration for their participation in the Inter-Ministerial Committee for the enumeration of pastoralist communities.

Sincere gratitude goes to management and staff of KNBS, especially the former Board of Directors led by the Chairman, Dr. Peter N. Mwita, the Director for Population and Social Statistics, Dr. Collins O. Opiyo, other Directors, senior officers and entire staff of KNBS for their spirited efforts towards successful enumeration and compilation of the reports. I also extend my unreserved appreciation to the National Coordinating Agency for Population and development (NCAPD) and the Rural Planning Directorate for the crucial role played by the management and staff of both institutions at various stages of the process.

I would also like to thank the Development Partners, namely USAID, UNFPA, UNICEF, DfID, UNDP, SIDA, and the US Census Bureau for their material, financial and technical support during various phases of implementation, and additional gratitude to UNFPA for coordinating donor support to the census process. I also wish to thank the faith-based organizations and the media for their partnership and role in sensitizing the populace on the importance of the census exercise.

Finally, I would wish to thank all Kenyans for their cooperation during the enumeration in particular, and support to the census process in general. I would like to reiterate our promise that the census records are strictly confidential and are being handled with utmost care, and that they will be used for purposes of statistical compilation only.

Mr. A.K.M Kilele, MBS

1.0 PREAMBLE

A population census is a complete count of the country's population. United Nations recommends that countries conduct censuses every 10 years. Kenya is one of the few Sub-Saharan African countries that strictly adhere to the decennial periodicity requirement and other features that embody modern population censuses worldwide.

Population and housing censuses are important statistical operations undertaken to provide information needed for a variety of purposes. Their fundamental purpose is to provide information on the size, distribution, composition and other social and economic characteristics of the population. Such information is necessary for monitoring the implementation of the national and global development agenda.

The Kenyan Government is committed to conducting regular and quality population and housing censuses to support the country's development planning process. Therefore, the Government made a decision to have comprehensive results for 2009 KPHC released as soon as possible to ensure timeliness and, subsequently, usefulness of the statistics in national decision-making.

This report is the fourth in the series of preliminary reports of the 2009 KPHC. This report contains information on; education, economic activity, housing conditions and household amenities, disability, ethnic and religious affiliations and livestock population. The following section summarizes information from key topics covered in this volume. The results in the series are tabulated for the 158 districts gazetted as at December 2008. Further work will be done, if necessary, to tabulate the results according to the current administrative units.

The next sections present background information on the planning and execution of the 2009 KPHC activities.

2.0 BACKGROUND

Kenya boasts a century of experience in census-taking. Records exist of censuses dating back to 1897 when the population of Kenya was estimated at 2.5 million persons (see Table D). However, these were mainly head counts that served the needs of government of the day. The first comprehensive census was undertaken in 1948 and the next one in 1962, some 15 months before the country claimed her Independence. The 1962 census, which enumerated about 8.6 million persons, helped to set up the political and administrative structures that have been widely used since Independence. The first post-independence census was undertaken in 1969 and enumerated 10.9 million persons. The country has conducted decennial population

censuses since 1969. The last was conducted in 1999 and enumerated a total of 28.7 million persons.

Therefore, the 2009 KPHC is the fifth to be undertaken in Kenya since Independence and the seventh since 1948. Kenyan censuses are historically *de facto* and conducted with the Midnight of 24th /25th August as the reference point in time. They are also primarily *canvassed* as recommended for countries that share Kenya's level of socio-economic development. However, the 2009 KPHC questionnaire also allowed *de jure* enumeration. All post-Independence censuses have been implemented in accordance with the UN Principles and Recommendations for modern censuses. For these and other reasons Kenya is regarded as a success story in census-taking in Sub-Saharan Africa. Table I presents census results for various periods since 1897.

Table I. Census-taking in Kenya: A century of experience and success

Year	Population (millions)
1897	2.5
1948	5.4
1962	8.6
1969	10.9
1979	15.3
1989	21.4
1999	28.7

3.0 PREPARATION OF 2009 KPHC

The 2009 KPHC, like the previous censuses, was implemented by the Kenya National Bureau of Statistics (KNBS) on behalf of the Government of Kenya – in accordance with the Statistics Act 2006. The theme for the census is “*Counting Our People for the Implementation of Vision 2030*”. The theme was deemed timely and pertinent in order to respond to the great demand for statistical information for the implementation of Kenya's current development goals and other global initiatives such as the Millennium Development Goals (MDGs) and the International Conference on Population and Development Plan of Action (ICPD-POA). Thus, from the very outset the planning for the 2009 KPHC took cognizance of the need to collect a variety of information for monitoring the achievement of these goals.

The main objective of the 2009 KPHC, therefore, was to provide the Government and other stakeholders with essential information on the demographic, social and

economic characteristics of the population, as well as housing conditions and household amenities. The specific objectives are to ascertain the following:

- Size, composition and spatial distribution of the population;
- Levels of fertility, mortality and migration rates;
- Rate and pattern of urbanisation;
- Levels of education attained by the population;
- Size and deployment of the labour force;
- Size, types and distribution of persons with disabilities; and
- Housing conditions and availability of household amenities.

Accordingly, the uses of 2009 KPHC data are diverse and include formulation and monitoring of national development programmes; allocation of national resources; review of administrative and electoral boundaries; locating social infrastructure such as schools and hospitals; and research.

3.1 Some Key Concepts and Definitions

Homestead: It is an isolated compound with one or more structures, and usually inhabited by one or more households. In most cases homesteads will be surrounded by fences, hedges, walls etc. A homestead may contain, for example, a hut or a group of huts.

Household: Refers to a person or group of persons who reside in the same homestead/compound but not necessarily in the same dwelling unit, have same cooking arrangements, and are answerable to the same household head.

Household Head: This is the most responsible/respected member of the household (as at the census night) who makes key decisions in the household on a day to day basis, and whose authority is honoured by all members of the household

Respondent: This may be the head of household or any other knowledgeable or responsible member of the household.

Structure: Refers to a building used for the purposes of residential, business or any other activity. For census purposes, a structure is defined as a building used for dwelling and related activities. In rural areas most of the structures are to be found within a homestead, and contain one or more dwelling units. In urban areas a structure may contain several dwelling units, e.g. storeyed buildings.

Dwelling Unit: This is a place of abode or residence occupied by one or more households, usually with a private entrance. There can be many dwelling units within a structure.

Enumeration Area (EA): This is a designated area with an average of about 100 households, but may vary from 50 to 149 households depending on the population density, terrain, and/or vastness of the area concerned. An EA may be a village, group of villages or part of a village, and is so delineated to be conveniently covered by an enumerator.

De Facto Census: *De facto* Census is one that enumerates all persons depending on where they spend (or are found on) the CENSUS NIGHT. Census enumeration can also be done via a *de jure* approach whereby persons are enumerated according to their usual place of residence. Although each approach has its own merits and demerits, the *de facto* approach is easier to implement, and mitigates chances of omission and duplication. The 2009 KPHC used the *de facto* approach, but an additional question determined whether individuals were *usual* members of the households where they were enumerated, which helps to constitute the *de jure* population as well.

Methods of Enumeration: There are two main methods of enumeration. In the *canvasser* method, information for each individual or household is collected and recorded on the questionnaire by a pre-trained census official designated to perform the tasks in the assigned area. The *householder* method, on the other hand, entails self-enumeration by each individual or household, although the questionnaires are usually distributed, collected and checked by a census official, but can also be sent directly via mail. The United Nations recommends the *canvasser* method as most suitable for largely illiterate populations or population groups who may find it difficult or unwilling to complete the census forms themselves.

Usual Member: A person who has lived in a household continuously for at least six (6) months during the 12 month period preceding the census, or intends to live for at least six months at the place of enumeration.

Age: Is the number of years one had lived as at last birthday i.e. in reference to the census night

Area: Is the extent of a surface enclosed within a specified boundary, expressed in square kilometres. This excludes areas covered by water.

Density: Refers number of persons per square kilometre, obtained by dividing the enumerated persons in a given area by the size of the area, expressed in KM²

Sex: Refers to condition or character of being female or male

Rural: Is a large and isolated areas of an open country (in reference to open fields and not forests, etc.), often with low population density.

Urban: Is an area with an increased density of human-created structures in comparison to the areas surrounding it and has a population of 2,000 and above. In

this definition, urban areas include the following: Cities, Municipalities, Town Councils and Urban councils.

3.2 Census Organisation

A population census is the most gigantic statistical operation in any country. It is also an important national exercise and, therefore, requires the participation of all stakeholders. Thus, a Legal Notice No. 107 of 8th August, 2008 was gazetted to establish the 2009 KPHC management structure. Under the management structure various committees were established at the national and district levels to guide the census process. The committees drew participation from Government departments and agencies, private sector, universities, religious organizations, and Non-Governmental Organizations (NGOs). The main committees included: Census Secretariat, National Census Steering Committee (NCSC), Technical Working Committee (TWC), and District Census Committees (DCCs).

The Census Secretariat was constituted in 2006 and charged with the overall planning and execution of the 2009 KPHC . It comprised senior officers at the KNBS. The NCSC provided policy advisory oversight to the Secretariat, while the TWC provided technical support to the Secretariat. The DCCs were responsible for the implementation of all census activities at the district level, with guidelines from the Secretariat. The terms of reference for various committees are given below:

National Census Steering Committee

- Formulate all relevant census policies;
- Foster linkages with the general public;
- Review strategies and plans related to publicity and advocacy;
- Review reports on the census implementation; and
- Examine the census instruments

Technical Working Committee

- Review census instruments;
- Recommend the best practices for preparatory activities, data collection and processing;
- Review quality assurance guidelines; and
- Monitor and evaluate all the technical activities of the census at all stages

District Census Committees

- Take charge of the general administration, coordination and execution of census activities in consultation with the Census Secretariat;
- Undertake publicity and advocacy activities within their respective districts;
- Make security arrangements in their respective districts;

- Ensure the safety of all census materials and instruments under their control; and
- Provide administrative and logistical support during recruitment, training, and enumeration

Additionally, there were several sub-committees through which the Secretariat implemented specific tasks. These include the Census Finance, Publicity and Advocacy, and Transport and Logistics sub-committees.

3.3 Cartographic Mapping

Cartographic mapping is the longest preparatory activity of the census process. It entails delineation of the country into reporting units called Enumeration Areas (EAs). This process is important for finalising enumeration plans (recruitment and deployment, distribution of materials and other logistics etc.), compilation and dissemination of results, and creation of the new household master sampling frame for inter-censal surveys.

The 2009 KPHC mapping started in November 2006 and was finalized in July 2009. During this process cartographers visited over 7,000 sub-locations and over 100,000 villages nationally to compile EA maps. The cartographic mapping process used Geographic Information Systems (GIS) and digital mapping aids to delineate EAs. In undertaking cartographic mapping, the KNBS staff took advantage of available techniques and technologies for use in the exercise. Various cartography/GIS equipment and materials were, therefore, procured for the GIS laboratory. High resolution aerial photography maps and vector data sets were also procured for all the urban centres in the country.

Cartographic work was done for 158 districts gazetted as at December 2008 (see map and legend in section 3.11). All maps were digitized, while the districts mapped earlier, particularly before the post-election disruptions were verified. The cartographic process provided the geographic framework that guided census enumeration plans.

During the mapping process the Secretariat also conducted nationwide sensitization of the Provincial Administration so as to empower them to effectively implement census activities in their respective districts. The sensitization was done at two levels: (1) sensitization for DOs, Chiefs and Assistant Chiefs, focusing on their roles and the filling in of necessary forms for mapping purposes; and (2) sensitization of the PCs and DCs on their roles as provided for in the Gazette Notice, guidelines on the establishment of District Census Committees and the general management of the census process.

3.4 Questionnaire Development

A participatory (intense user consultation) approach was adopted in the development of the 2009 KPHC instruments (questionnaires, manuals) in order to take into account the views of various stakeholders. The initial drafts were done by the Secretariat in early 2008 and shared with various stakeholders in July 2008 at a stakeholders' workshop. The instruments were piloted in August 2008 and then shared again with key stakeholders. Towards their finalisation, the questionnaires were discussed with the TWC based on the results of the pilot census, and then presented to the NCSC for discussion and approval.

The development of the census questionnaires was guided by the UN Principles and Recommendations for 2010 Round of Population and Housing Censuses. In an attempt to cover all population groups, five questionnaires were developed and adopted: one main questionnaire, and four short ones:

- Main (long) questionnaire for covering populations in conventional households and those who spent the census night in institutions such as boarding schools and colleges. The main questionnaire was administered over a period of 7 days, but with reference to the census night.
- Four (4) short questionnaires for covering special populations, strictly administered on the census night:
 - Hotel/lodge residents; hospital in-patients, prison/police cells;
 - Travellers and persons on transit;
 - Vagrants and outdoor sleepers;
 - Emigrants.

The main questionnaire contained new questions (in addition to the traditional census questions) on several areas thought to be crucial to monitoring the implementation of current national and global development goals such as disability, maternal mortality, gainful employment by sector (formal versus informal), livestock census, use of ICT (computer, internet, mobile phones), and emigrants (characteristics, remittances).

3.5 Pilot Census

The United Nations recommends a dress-rehearsal of the census enumeration plan a year before the enumeration in order to prepare adequately to undertake the main census enumeration. Accordingly, the Census Secretariat conducted a pilot census from 24th /25th August, 2008 to 31st August, 2008 in 16 districts to test the preparedness to undertake the 2009 KPHC . Specific objectives of the pilot census were to:

- Pre-test the questionnaire and training manuals;
- Check on the quality of enumeration area (EA) maps;
- Test the overall organisational and administrative structure and general logistics;

- Ascertain the number of personnel required; and
- Test the adequacy of the enumeration period.

During the pilot census a complete enumeration of the population in the sampled sub-locations was carried out. The results provided important information on the adequacy of field organization and logistics, census instruments, training programme and data processing plan, as well as extent of respondent burden; and other important aspects of the census. The findings of the pilot helped finalise the arrangements and preparedness for the main enumeration.

3.6 Recruitment and Training

Experience shows that competitive recruitment and effective training are important prerequisites to successful census enumeration. A competitive and transparent recruitment process was mounted in order to hire personnel capable of understanding the key concepts and following instructions satisfactorily to ensure successful enumeration.

Census positions were advertised nationally on print media and radio, and through provincial administration offices. Applications from interested and qualified persons were addressed to the respective (DCCs) to whom the Secretariat delegated the authority to recruit according to established criteria. Interviews of shortlisted candidates were conducted on scheduled dates nationally for all the census cadres. Other than the minimum academic qualifications spelt out in the adverts, candidates were also considered based on their geographic residences. All applications were handwritten, which provided an opportunity to screen the handwritings for legibility – an important determinant of successful data transcription via scanning. Senior supervisors were recruited at the district level and supervisors and enumerators at the divisional level. Supervisors and enumerators recruited had to be conversant with the language(s) or dialect(s) of the area in which they were to be deployed. Enumerators (and, to a large extent, Supervisors) were required to be residents of the EAs where they would work. To undertake the enumeration phase, a total of 111,696 Enumerators, 22,323 Supervisors, and 5,788 Senior Supervisors were engaged. In some parts of the country, particularly in districts in ASAL areas the qualification thresholds had to be lowered and other criteria varied slightly in order to raise enough enumeration personnel.

Training of field personnel was cascaded. A national core team of experts in census and survey implementation drawn from KNBS and other government departments, and from universities and other research and training institutions was constituted to train a team of carefully selected Trainers. The team also developed a comprehensive training programme for each cadre of field personnel. The Trainers thereafter proceeded to train Senior Supervisors for five days at respective provincial headquarters. The experts then teamed up with the trained Senior Supervisors to train

(and oversee the training of) Supervisors at their respective district headquarters. Training of Enumerators was conducted by the trained Supervisors within their respective divisions (and overseen by the Senior Supervisors) and monitored by Coordinators from the head office. Both Supervisors and Enumerators were trained for 7 days each. Training activities ended two days before the census enumeration date to allow for collection of materials, deployment and identification of the assigned EAs.

3.7 Enumeration

Census enumeration is a critical phase in the census process and involves the actual collection and recording of information. The 2009 KPHC, like the previous censuses, adopted the *de facto* as opposed to *de jure* approach, and the *canvasser* as opposed to the *householder* method. However, an additional question was included to identify whether each individual was a *usual* resident in the household of enumeration, which helps to compile the *de jure* population. Additionally, some foreign and diplomatic missions were allowed to self-enumerate using a short questionnaire.

During enumeration, the target population was all persons who spent the night of 24th/25th August, 2009 in households, institutions, or at outdoor locations within the administrative boundaries of Kenya or those transiting through Kenyan territory on census night. The frameworks of identification were defined to cover populations in conventional households, institutions, on transit and even those with no fixed abode (out-door sleepers). The unit of enumeration for housing characteristics was the main dwelling unit.

All persons in conventional households and institutions such as boarding schools and colleges were enumerated as scheduled within the seven days using the main (long) form, while the other categories such as hotels, travellers and out-door sleepers were strictly enumerated on the census night using the short forms. Coordinators, Senior Supervisors and Supervisors worked closely with Enumerators to ensure quality data was collected. On balance, the workload ratios were five Enumerators to a Supervisor, and four Supervisors to a Senior Supervisor, although this varied slightly from place to place due to a variety of factors. Each Enumerator was accompanied by a Village Elder to the extent possible. Census activities in each district were overseen by the respective DCC (entire provincial administration officials, DSO and Heads of Departments), and District and Regional Coordinators. Census enumeration started in earnest with the enumeration of the President and his family, followed by several dignitaries in the public and private sector on the census night.

H.E President Mwai Kibaki is shown the physical location of State House by the Director for Population and Social Statistics, Dr. Collins Opiyo, shortly before being enumerated at State House, Nairobi. Looking on (from left) are Director General of KNBS, Mr. A.K.M Kilele, Minister of State for Planning, National Development and Vision 2030, Hon. Wycliffe A. Oparanya, Permanent Secretary for Internal Security and Provincial Administration, Mr. Francis Kimemia, and Permanent Secretary in the Ministry of State for Planning, National Development and Vision 2030, Dr. Edward Sambili.

3.8 Post Enumeration Survey

A Post Enumeration Survey (PES) was conducted in November, 2009 in a representative sample of 305 Enumeration Areas (EA). The purpose of the PES is to help evaluate the completeness and accuracy of the census enumeration. The PES data will be processed alongside the main census data and results used to assess the validity of the census figures.

3.9 Data Processing Activities

Data processing is a crucial and integral part of the post-census activities. Specifically, it involves data capture, processing and/or cleaning, and tabulation. The 2009 KPHC has taken full advantage of advances in ICT in the implementation of various census activities, especially cartographic mapping and data processing. While a variety of methods have been developed for capturing data for population and housing censuses, the KNBS opted for the OCR/ICR (Optical /Intelligent Character Recognition) scanning technology. After several consultations and also drawing from the lessons of the last census a decision was made to use the Integrated Computer Assisted Data Entry (ICADE) system, supported through technical assistance provided by the US Census Bureau. The census forms were specifically designed and enumerators specially recruited and trained to enhance the efficiency of the ICADE system, which, ideally, ought to run faster and use fewer staff compared to the other options

considered. The ICADE process ran its full course by early July 2010 after capturing information from over 10 million forms.

3.10 Some Best practices

The 2009 KPHC enumeration was a resounding success. With the benefit of hindsight, and going by experiences in other countries, certain measures put in place by the census management resulted in the successful enumeration. The measures are highlighted below.

- **Management structure:** An effective management structure was put in place, which benefitted from government participation and political commitment at the highest level. The structure elicited participation from key stakeholders through various committees established both at national and district levels. The NCSC – the supreme advisory committee that oversees and approves all census activities – draw participation from key public and private sector organisations. The committee is chaired by the Permanent Secretary in the Ministry of State for Planning, National Development, and Vision 2030 (who is also the National Census Officer), assisted by the Permanent Secretary for Internal Security and the Provincial Commissioner for Nairobi Area. The census management also greatly benefitted directly from development partners through a Donor Forum (constituted by the Hon. Minister of State for Planning, National Development and Vision 2030) that met occasionally to support resource mobilisation efforts as well as advise on other aspects of implementation.
- **Census profile raised:** The census profile was raised considerably by linking its theme to the achievement of national and global development goals. This helped draw political leadership and commitment at highest level and highlighted its national stature.
- **Communication strategy:** An effective communication strategy was developed and implemented through a private media consulting firm with the support of the Development Partners. The strategy facilitated widespread consultation of various opinion leaders and their sensitization on the national importance and benefits of census information. A key publicity event by way of national launch presided over by His Excellency the President on 31st July 2009 marked the 25-day countdown to the enumeration, and reassured political support to the census process, positioning it as a high priority national exercise. The census communication team also maintained proactive media management during the census period, holding daily briefings and press conferences to discuss progress of enumeration. Finally, a communication command centre was set up with telephone hotlines and managed on a 24-hour basis by the Secretariat to answer questions from members of the public and help direct enumerators to households that were still waiting to be enumerated.
- **Census holiday:** The President declared a census/public holiday on the first day of the census (25th August 2009), while the Minister for Internal Security

encouraged limited social activity and travel on the census night so that people could stay home to be enumerated. This greatly facilitated the pace of enumeration – especially in major urban areas.

- **Preferential enumeration of dignitaries:** Key personalities (VIPs) were zoned and enumerated by senior officials on the census night with media coverage.

The Prime Minister, the Rt. Hon. Raila Amolo Odinga and his wife Mrs. Ida Odinga being enumerated at their residence by the Director for Population and Social Statistics, Dr. Collins Opiyo. Looking on (from left) are Minister of State for Planning, National Development and Vision 2030, Hon. Wycliffe A. Oparanya, Permanent Secretary in the Ministry, Dr. Edward Sambili, and Director General of KNBS, Mr. A.K.M Kilele.

- **Competitive recruitment, effective training and attractive remuneration:** Qualified census personnel were recruited through a transparent and credible process. An effective training program was also mounted for all cadres, and an attractive remuneration offered. These measures ensured recruitment and retention of qualified personnel and, subsequently, the success of the enumeration exercise.
- **Security:** Because of the heightened insecurity concerns by members of the public, the Government put in place a comprehensive security operation scheme to ensure the safety of both the households and census personnel during the enumeration period. Sufficient security personnel were mobilised by the Government to that end. The publicity machinery also addressed insecurity concerns through several talk shows and press conferences. The Census/Public holiday declared by His Excellency the President was, in part, geared to addressing insecurity concerns in some parts of the country by ensuring the enumeration was done during the day. These measures ensured enumeration

was conducted in a peaceful and tranquil atmosphere, contributing to its success.

- **Independent Census Monitoring:** The Government made a decision to have the census enumeration externally and independently monitored by a team of experts to encourage transparency and effective supervision and implementation. The monitors also gave real time feedbacks to the Secretariat on any events or incidents that could pose threats to successful enumeration. This is the first time independent monitors were involved in the Kenyan census process.

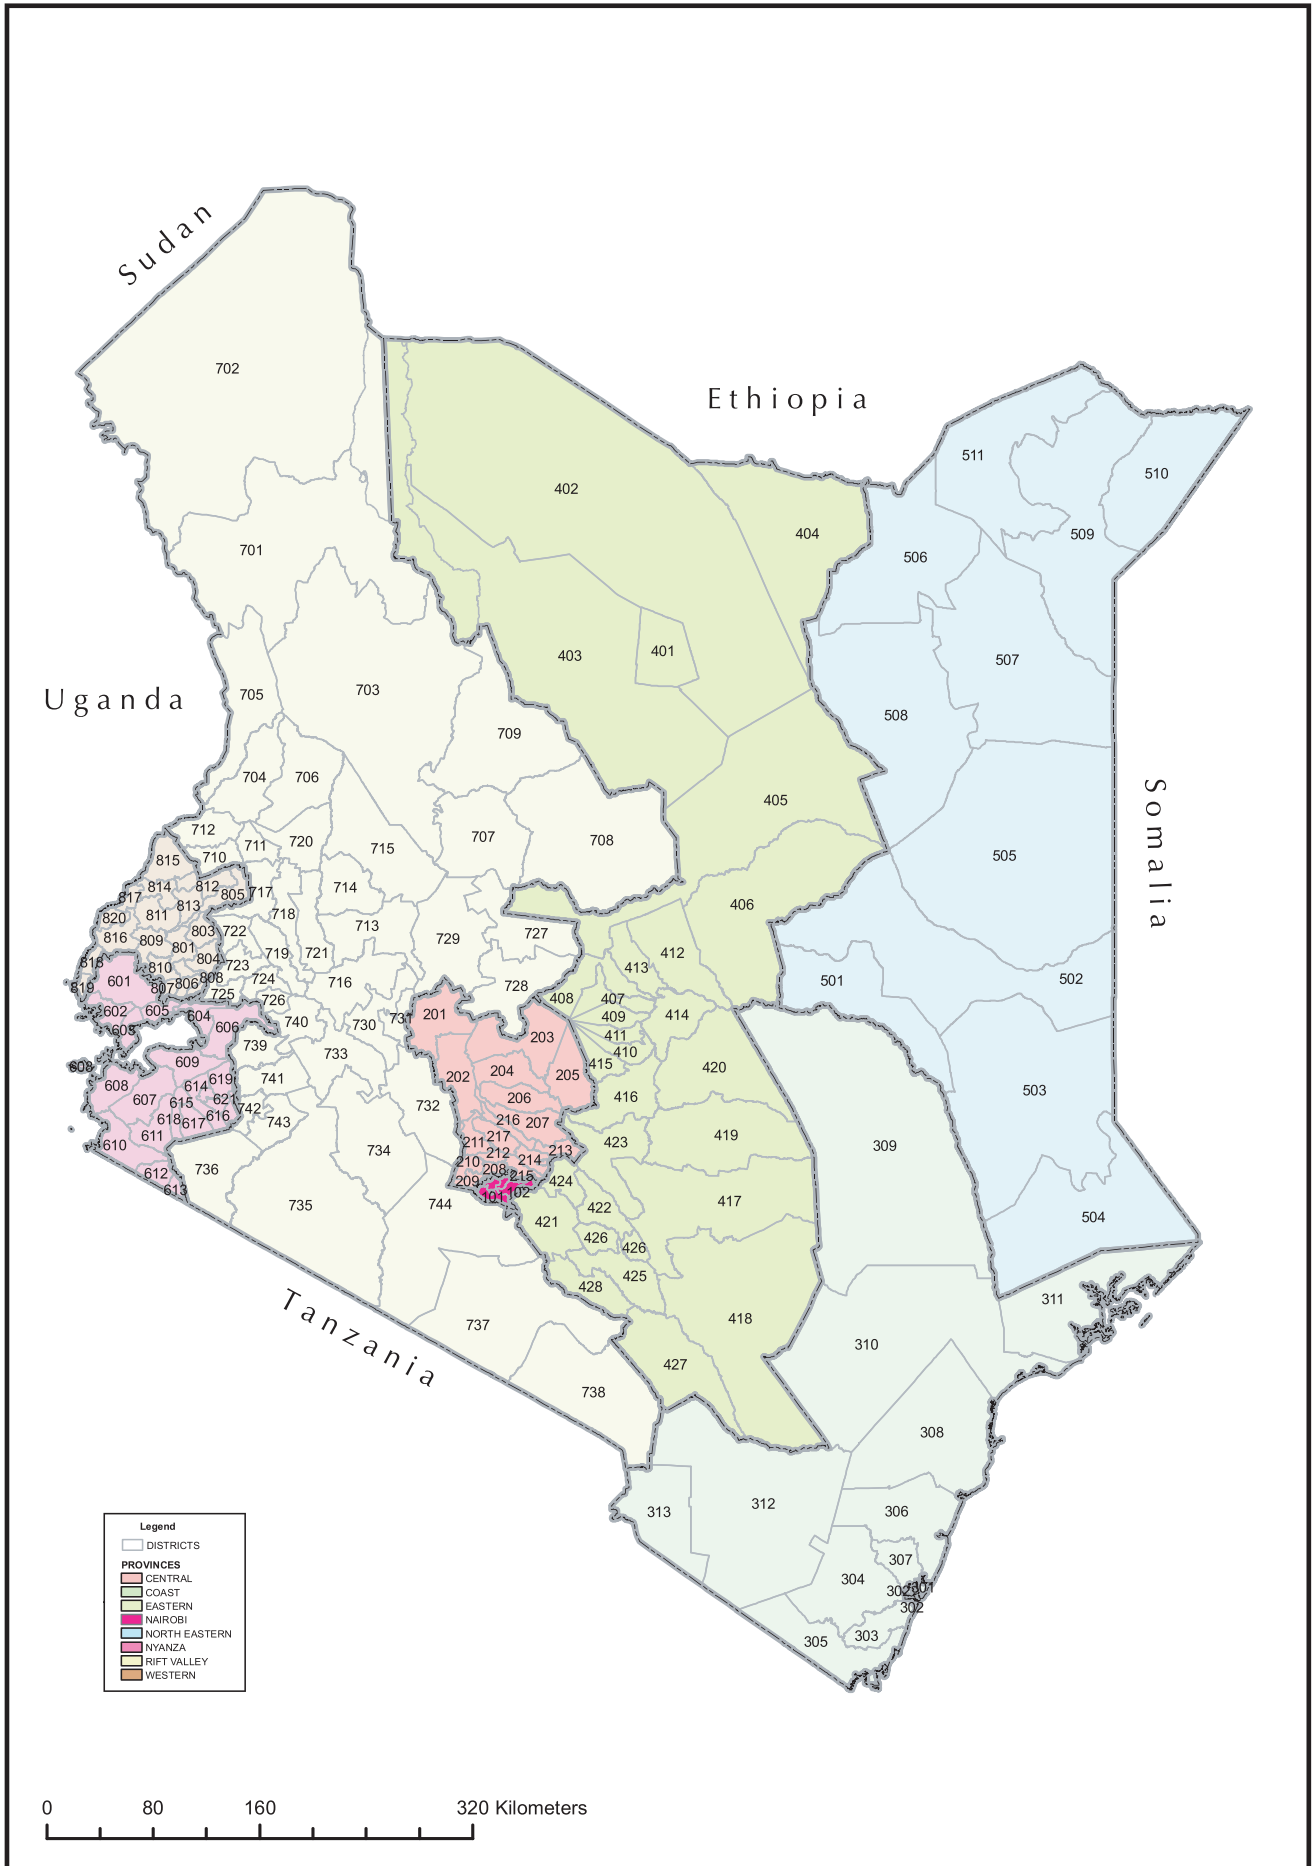

3.11 Constraints/Challenges

- **Cartographic mapping** exercise was disrupted by the post-election violence leading to loss of valuable time.
- **Boundary disputes** in some of the districts slowed the pace of mapping and enumeration.
- **Resource constraints:** The 2009 KPHC was implemented against the backdrop of an international credit crunch. This resulted in inadequate funding for the census exercise especially by the Development Partners. The Government responded by allocating more resources to the census exercise. However, the non-timely flow of funds, to some extent, interfered with the pace and completeness of implementation.
- **Enumeration of nomadic/pastoralist population** proved challenging owing to vast distances and difficult terrains that complicated logistics. Additionally, the prolonged drought during the period preceding the enumeration heightened nomadic activity – sometimes across Kenyan frontiers, which made enumeration of the communities a somewhat complex exercise.
- **Perceived sensitivity** of certain questions, particularly on ethnicity (tribe) generated significant controversy. However, heightened advocacy on the importance and spirit of the question, mainly through the census communication machinery, helped the public understand and appreciate the usefulness of the question.
- **Delayed payment** of census personnel was misconstrued by many a citizen as depicting incompetence on the part of Government officials responsible. The Government favoured electronic funds transfer (EFT) as the ideal method of payment of all field personnel. However, several field personnel did not submit the complete and accurate particulars necessary to process their payments (correct names, identity card numbers, banking particulars).

3.12 Preliminary Results

The results in this report are presented for the 158 districts which were gazetted as at December 2008 as indicated below. However, some aspects of the results will be presented at national and/or provincial level. Further work will be done, where necessary, to tabulate the results according to the current administrative units.

5.0. SUMMARY FINDINGS

5.1 Enumerated Population

Tables 1, 1a, 1b and 2 present the enumerated population by administrative units disaggregated by sex, number of households, land area and density while Table 3 presents the enumerated population living in major urban centres in Kenya. An urban area is defined as one with an increased density of human-created structures in comparison to the areas surrounding it and has a population of 2,000 and above. For the purposes of this census, urban areas include the following; Cities, Municipalities, Town Councils and Urban Councils.

The number of persons enumerated during the 2009 Population and Housing Census were 38,610,097 representing an increase of 35 percent from the 1999 census. Of this, 19,192, 458 were males while 19,417, 639 were females. Table II and Figure II present trends in population size by province since 1969.

Table II: Population Distribution by Province, 1969-2009

Province	1969	1979	1989	1999	2009
Nairobi	509,286	827,775	1,324,570	2,143,254	3,138,369
Central	1,675,647	2,345,833	3,111,255	3,724,159	4,383,743
Coast	944,082	1,342,794	1,825,034	2,487,264	3,325,307
Eastern	1,907,301	2,719,851	3,768,689	4,631,779	5,668,123
North Eastern	245,757	373,787	371,391	962,143	2,310,757
Nyanza	2,122,045	2,643,956	3,507,160	4,392,196	5,442,711
Rift Valley	2,210,289	3,240,402	4,917,551	6,987,036	10,006,805
Western	1,328,298	1,832,663	2,622,397	3,358,776	4,334,282
Kenya	10,942,705	15,327,061	21,448,047	28,686,607	38,610,097

The provinces with the highest population increase are North Eastern (whose population has more than doubled since 1999), Nairobi and Coast respectively.

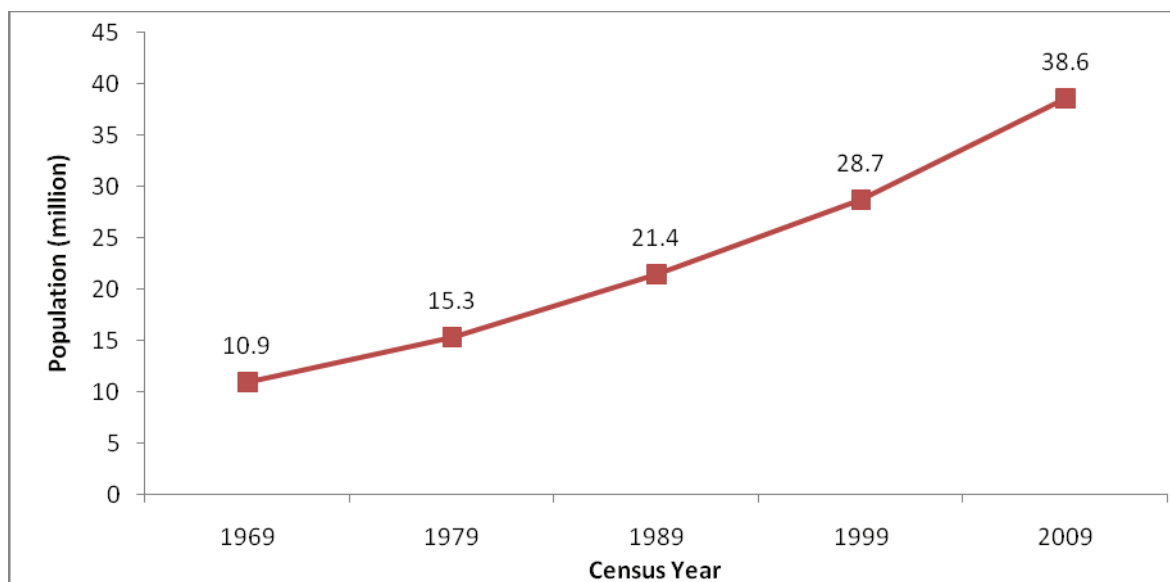

Figure II: Kenya's Population Trend, 1969-2009

Table III presents comparison between the enumerated and the projected population. The national enumerated population was lower by 2.1 percent compared to the projected figures.

Table III: Comparison between enumerated and projected population, 2009

	Projected Population	Enumerated Population	Difference between Enumerated and Projected	
			Number	Percent
KENYA	39,423,264	38,610,097	-813,167	-2.1
NAIROBI	3,260,124	3,138,369	-121,755	-3.7
CENTRAL	4,784,778	4,383,743	-401,035	-8.4
COAST	3,419,757	3,324,805	-94,952	-2.8
EASTERN	6,117,671	5,668,123	-449,548	-7.3

6.0 SUMMARY OF FINDINGS

This volume contains information on education, economic activity, housing conditions and household amenities, disability, ethnic and religious affiliations and livestock population. The following section summarizes information from key topics covered in this volume.

6.1 EDUCATION

Education is a key pillar for human development towards the realization of Vision 2030 as it imparts knowledge and skills to individuals necessary for nation building. Kenya has, therefore, embraced a national education system which starts from pre-primary, primary, secondary, tertiary and university with linkages in the provision of basic literacy and vocational training. The education system is structured to integrate needs of young people and adults so as to provide the relevant learning and life skills.

In the 2009 Kenya Population and Housing Census, all persons aged 3 years and above were asked to indicate the school/learning institution attendance status, highest level reached and highest level completed. The information solicited was to ascertain the education accomplishment of the targeted population in formal and non-formal education. The formal schooling information covered pre-primary, primary, secondary, youth polytechnics, tertiary (middle level colleges) and university levels. The non-formal education covered learning institutions that offer literacy programmes such as adult education and “*madrassa*”.

Tables 1, 1a, 1b, 2, 2a, 2b, 3, 3a and 3b present the distribution of population aged 3 years and above by status of school attendance, highest level of education reached and currently attending school disaggregated by sex and administrative units.

About 14.1 million eligible respondents are at school, 14.2 million had left school and 6.1 million (17 percent) had never been to school as illustrated in Table 1. Approximately two percent of the respondents did not state their school/learning institution attendance status. Results of the 2009 census population data show an improvement in school attendance at 40 percent compared to 35 percent in 1999 and 37 percent in 1989 respectively. There has been a gradual decline in the proportion who have never attended school. Data in Tables 1a and Table 1b show that among the respondents, 41 percent are attending school in rural areas compared to 38 percent in urban areas. For those who left school, 36 percent are in the rural areas compared to 51 percent in urban areas. Those who never attended school are 22 percent in rural areas compared to only eight percent in urban areas.

Table 2 presents data on education attainment of the respondents based on the highest level reached. Majority of the respondents had attained primary education (51 percent), followed by secondary education (17 percent), 7 percent had pre-primary education. Three percent had tertiary education (middle level colleges) while

two percent had university education and 0.5 percent attained youth polytechnic education. The population with non-formal education is less than one percent (0.2 percent for basic education literacy and 0.7 percent “madrassa”).

There were about 14.1 million persons attending school in 2009 as illustrated in Table 3. The population currently attending the different levels was as follows: pre-primary about 2.2 million (16 percent); 9.4 million (67 percent) in primary and 1.8 million (13 percent) in secondary education. There were about 290 thousand students in tertiary institutions (2 percent), 198 thousand in universities (1 percent) and another 35 thousand (0.2 percent) in youth polytechnics. In non-formal education, there were about 15 thousand (0.1 percent) persons attending basic literacy classes and 142 thousand (1 percent) in madrassa. In terms of gender, the proportion of girls to boys in primary, secondary, tertiary and university education was 0.95, 0.87, 1.13 and 0.72 respectively. The data reveal that there are more boys than girls attending schooling at all levels except in overall attendance among the middle level colleges (tertiary institutions). Further analysis of census data as shown in the Table I shows that the number of children out of school in the formal education system was as follows: 2.1million (58 percent) in pre-primary; 1.9 million (23 percent) in primary; and 2.7 million (76 percent) in secondary.

Table VII: Population Aged 3 Years and Above by Sex, and current level of attendance

Level of Education	Male	Female	Total
Pre-primary			
Gross Attendance	1,150,890	1,096,181	2,247,071
Net Attendance (3-5 years)	751,200	751,002	1,502,202
Out of School Population (3-5 years)	1,069,945	1,024,152	2,094,097
Primary			
Gross Attendance	4,838,278	4,587,112	9,425,390
Net Attendance (6-13 years)	3,289,757	3,288,240	6,577,997
Out of School Population (6-13 years)	1,028,700	916,321	1,945,021
Secondary			
Gross Attendance	962,887	833,580	1,796,467
Net Attendance (14-17 years)	399,208	444,593	843,801
Out of School Population (14-17 years)	1,397,511	1,264,305	2,661,816

6.2 ACTIVITY STATUS OF THE POPULATION AGED 5-YEARS AND ABOVE

The analysis of the activity status of the 2009 Population and Housing Census is based on the standard labour force framework. The framework categorizes the population into mutually exclusive groups namely; the economically active population commonly referred to as the labour force and the economically inactive population. The labour force consists of the members of the population who at the specified time were working plus those not working but available to work. This consists of the employed and the unemployed. The inactive population covers those not available to work and

includes; the incapacitated, the homemakers, the retired and fulltime students. Sometimes the population outside the working age is included in the inactive population but age boundaries vary from country to country. Tables 4, 4a and 4b present population aged 5 years and above by activity status disaggregated by sex and administrative units.

The activity status of the population was determined with respect to one week reference period (current active population).The category employed includes those who in the last seven days prior to the census night reported to have worked for pay, on leave or sick leave, those who worked on own or family businesses and those who worked on own or family agricultural holdings. Persons who were on attachment (interns and apprentices) and volunteers were also included in this category.

As shown in Table II below, the total population aged 5 years and above is 32.7 million with males accounting for 50 percent. Out of these, the economically active population are 18 million (15.8 million employed and 2.2 million seeking work). The inactive population is 12.8 million of which 7.2 million are females. About 1.9 million are in the last category of "undetermined" and comprise those who for some unspecified reasons never reported their activity status.

The proportion of the active population aged 5 years and above declined to 58 percent in 2009 compared to 66 percent in 1999. The males account for 53 percent of the active population. Similarly, the proportion of employed declined to 88 percent in 2009 compared to 92 percent in 1999. The proportion of the inactive population within the same period has risen from 34 percent to 42 percent with the largest proportion being the full time students. Females account for 56 percent of the inactive population.

Tables 4a and 4b present the distribution of the population 5 years and above in rural and urban areas respectively. The urban population account for 33 percent of the population aged 5 years and above. Of the active population, about 3 in 10 are in the urban areas. About 1 out of every 3 persons in urban area is inactive.

Table VIII: Population aged 5 years and above by Activity Status 1999 and 2009

Activity status	Percent		Number (Millions)	
	1999	2009	1999	2009
Active population	66.1	58.3	15.6	18.0
Employed	91.9	87.8	14.5	15.8
Inactive population	33.9	41.7	8.1	12.8

It is a subset of the economically active population

6.3 HOUSING MATERIALS AND AMENITIES

Tables 5, 5a, 5b, 6, 6a, 6b, 7, 7a and 7b present percent distribution of households by the main type of housing materials disaggregated by administrative units. Tables 8, 9,

9a, 9b, 10, 10a and 10b present percent distribution of households by housing amenities disaggregated by administrative units.

6.3.1 Housing Materials

Table III shows a summary of the trends in the proportion of households by main housing materials and amenities. Nationally, there was a general improvement in housing conditions with regard to the wall, roofing and floor finish materials.

The 2009 KPHC results compare well with previous censuses with a high percentage of households reporting corrugated iron sheets or grass as the main roofing materials. There is a slight increase on the proportion of households with iron sheet roofing (from 63% in 1999 to 73% in 2009) and a drop of the proportion of households with grass roofing (from 23% in 1999 to 14% in 2009) which may be explained by the continued strain on the environment which consequently do not permit use of grass as roofing materials.

Table IX: Percentage of Households by Housing Materials (Wall, Roofing and Floor finish Materials) and Amenities (Water, Human Waste Disposal, Lighting Fuel) at the National Level

Housing Component	Material Type	Percent		
		1989	1999	2009
Roofing	Corrugated Iron Sheet	52	63	73
	Grass	*	23	14
Wall	Stone		12	17
	Brick/Block	12	14	17
	Mud/Wood	57	47	37
	Mud/Cement		7	8
	Wood	10	11	11
Floor	Cement	27	35	41
	Earth	70	63	57
Housing Amenities				
Lighting Fuel	Electricity	9	14	23
	Lantern		34	31
	Tin Lamp	81	44	39
Human Waste Disposal	Sewer	7	8	8
	Septic Tank		2	3
	Pit Latrine	69	72	75
	Bush	20	16	14
Water	Piped	32	31	30
	Vendor	*		7
	Lake/Dam/Pond		8	5
	Stream		27	22
	Borehole/Well/Spring		33	36
Number of Households		4,352,751	6,371,370	8,738,097

* Information not collected in the same format as in subsequent censuses

The 2009 KPHC data show a significant reduction in the proportion of households with mud/wood wall from 57percent in 1989 to 37percent in 2009 respectively. Generally, there is slight increase in proportion of households with stone and brick/block walls. The proportion of households with Brick/Block wall increased from 12 percent in 1989, 14 percent in 1999 and 17 percent in 2009 respectively.

Majority of households reported to have cement and earth as the main floor finish materials. However, the proportion of households with cement floor increased by 6 percent between 1999 and 2009 while those with earth as their floor finish decreased by 6 percent between the same periods.

6.3.2 Housing Amenities

Majority of households in Kenya use lantern or Tin lamp as the main source of lighting. However, this proportion has been declining. The proportion of households using electricity as a main source of lighting has been increasing since 1989.

Majority of households use pit latrines as the main source human waste disposal. However, a high proportion (14 percent) of households, still use the bush although it has been declining. The proportion of households using the main sewer as their main source of human waste disposal remains stagnant at 8 percent over the last ten years.

The main source of water for most households is still borehole/well/spring. However, the proportion of households using piped water has been declining since 1989. For the first time, vendor as a source was included as a separate category with significant proportions of households especially in urban (Mombasa 25 percent, Nairobi 17 percent and Kisumu East 16 percent) and ASAL (MARSABIT 38 percent, Wajir West 23 percent and MANDERA EAST 20 percent) areas relying on them.

6.4 LIVESTOCK POPULATION

Increasing demand for timely and reliable statistics informed the decision to collect data on livestock numbers during the 2009 Population and Housing Census. This is the first time data on livestock numbers was collected within a population census in Kenya. The livestock population data is expected to provide information at lower levels of disaggregation that is necessary for policy formulation, monitoring and evaluation. The data will also provide important benchmark statistics in the livestock sub-sector.

The livestock data presented in this and other census reports was collected against a background of prolonged drought which affected most parts of the country. This resulted in large numbers of livestock deaths and widespread migration of cattle in search of pasture. The livestock module collected data on the number of exotic and indigenous cattle, sheep, goats, camels, donkeys, pigs, chicken, and bee hives. Data collection covered both households and institutions such as schools and prisons which kept animals during the census. The livestock data collected referred to animals kept within a district. Livestock refers to animals kept or managed by households during the census reference period.

Table 11 presents data on the distribution of various types of livestock by region. In August 2009 the country had a total of: 17.5 million cattle; 27.7 million goats; 17.1 million sheep; 334.6 thousand pigs, 2.9 million camels and 1.8 million donkeys respectively. Chicken recorded the highest livestock count of 31.8 million birds out of which 25.7 million were indigenous and 6.1 million were of commercial type.

6.5 SOCIAL CHARACTERISTICS OF HOUSEHOLD POPULATION

The social characteristics (religious and ethnic affiliations) of the household population disaggregated by administrative units are presented in Tables 12 and 13. Majority of Kenyans belong to the Protestant church (48 percent) followed by Catholics (24 percent). Muslims account for 11 percent of the national while about 2 percent reported not being affiliated to any religion.

6.6 DISABILITY

The disability act 2003 defines disability as a physical, sensory, mental or other impairment, including a visual, hearing or physical impairment which has substantial long term adverse effect on a person's ability to carry out usual day to day activities. For purposes of the 2009 population census, persons with disabilities were categorized into the following main domains:

- Visual impairment
- Hearing impairment
- Speech and language difficulties
- Physical disabilities
- Mental disabilities
- Self care difficulties
- Others (other disabilities).

This is the first time data collected from a census on persons with disability is being published. Table 14 shows the distribution of the household population by main type of disability status by administrative units disaggregated by sex. Information regarding disability status was obtained from only conventional households. About four percent of the population have some form of disability. The most common types of disability are visual and physical/self care. Slightly more males had some form of disability.

The census would like to note the challenges that go along collecting data on disability. Disability is not a phenomenon that can be easily described with a binary classification of yes/no. In this regard, this aspect is particularly difficult in a census where the number of questions asked is restricted. The use of short questions in a census tends to underestimate special population groups such as, children, elderly, persons with cognitive and psychological impairments. Specialized surveys where longer instruments can be used are more suitable to measure disability in these sub-population groups. Censuses have an extensive use of proxy respondents.

6.7 OWNERSHIP OF HOUSEHOLD ASSETS

At household level, information was also collected on ownership of assets. The items included; radio, television sets, mobile phones, landline telephone, computers, bicycles, motorcycles, cars/trucks etc. Table 15 presents information on the ownership of household assets by administrative units.

6.8 OBSERVED ANOMALIES IN THE DATA

The preliminary analysis of the data indicates that generally the 2009 KPHC data are quite complete and accurate. However, results from eight (8) districts, namely Mandera central, Mandera East, Mandera West, Lagdera, Wajir East, Turkana Central, Turkana South and Turkana North, are anomalous, and exhibit population growth rates that deviate significantly from the patterns portrayed not only by the rest of the country but by their respective neighboring districts as well.

In particular, the following observations have been made in respect of the districts:

- Rate of increase (growth rate) is higher than the population dynamics (birth and death rates) would support;
- Age and sex profiles deviate from the norm; and
- Significant growth in observed household size without accompanying growth in number of households;

The Government, regardless, has decided to release the results as enumerated. However, the data will be assessed further using internationally acceptable procedures, and suitable remedial measures undertaken. Meanwhile, the stakeholders and the public are advised to exercise caution while using the interim results for the affected districts.

7.0 CONCLUDING REMARKS

The 2009 Kenya Population and Housing Census results are provided at different administrative and political levels for effective decision making. The results therefore reflect on the performance of past policies and programmes implemented to improve the welfare of Kenyans. With various initiatives having been put in place by the Government, the census data should assist greatly in targeting resources to areas which need them most.

Clearly, Kenya's population growth is fairly high for her area size and level of socio-economic development. At the current growth rates, the country is adding about one million people to its population annually. This will continue to present a big challenge for sustainable socio-economic development.

GLOSSARY

Basic Literacy: Refers to Non formal education programme that involves teaching numeric and literacy skills especially targeting adult learners and at the end of the cycle the learners sit a proficiency examination or Kenya Certificate Primary education (KCPE).

Employed: refers to those were engaged in some economic activity and includes those who worked for pay, own family business, apprentice/volunteer and those on leave/sick (held a job) during the last seven days prior to the census night

Exotic Cattle: Refers to cattle whether pure (non-indigenous) or improved breeds

Floor Material: refers to the main construction material used on the finishing of the floor of the main dwelling unit

Formal Education: It is the process of training and developing people in knowledge, skills, mind, and character as structured in the Kenyan national education framework

Homemaker: is a person of either sex involved in household chores in his/her own home e.g. fetching water, cooking, babysitting etc, who did not work for pay or profit or sought work. This does not include houseboys/girls

Inactive Population: refers to the economically inactive and includes the retired, full time student and incapacitated

Indigenous Cattle: Refers to the local breeds of cattle such as the Zebu and Boran breeds, among others

Indigenous Chicken: Refers to local breeds of chicken, usually reared on free range

Livestock: Livestock refers to all animals, birds and insects reared or kept in captivity mainly for food, sale, labour or other purposes. Examples of livestock include cattle, goats, sheep, camels and pigs as well as poultry, bees and silkworms

Madrassa: It is a Non formal education programme at elementary level that involves teaching numeracy and literacy skills based on Islamic knowledge

Non Formal Education: It is an education programme that offers flexible learning for adults and school going children who are not able to join the formal system of education

Population of Animals: Refers to the number of animals kept by the household at a specific point in time, usually the day of enumeration. This refers to the number of

animals being raised by the household on the reference date, regardless of ownership status. Bees were counted on the basis of the number of hives

Pre-Primary Education: It is referred to as Early Childhood Development Education (ECDE). It is an education programme offered to provide holistic integrated services that create a strong foundation for the child's cognitive psycho-social, moral, spiritual, emotional and psychomotor needs

Primary Education: It is the first 8 years of basic education in the formal system with pupils going through Standards 1 to 8 and eventually sitting for the Kenya Certificate of Primary Education (KCPE) examination

Roofing Material: refers to the main construction materials used on providing the basic protection for the occupants of the main dwelling unit from external elements such as rain etc

School Attendance Status: refers to whether or not one was attending school at any regular accredited educational institution or programme, public or private, for organized learning at any level of education at the time of the census or, if the census is taken during the vacation period at the end of the school year, during the last school year

Secondary Education: It is the education programme offered for 4 years after primary education and at the end of the cycle the students sit for the Kenya Certificate of Secondary Education (KCSE) examination.

Seeking Work/No Work: refers to those who did not hold any work seven days prior to census night and were either seeking for work or reported no work available

Tertiary Education: It is a post secondary education programme undertaken in middle level colleges that offer various disciplines (education, agriculture, health, TIVET etc) at certificate and diploma levels

University Education: It is an education programme that allows learners to move to the last cycle of formal education in varied sectors leading to professionals

Wall Material: refers to the main construction materials used to sustain the structural capacity and soundness of the walls of the main dwelling unit

Water Source: This is the main source from which, for most part of the year, the household draws its water for various uses

Youth Polytechnic: It is an institution that offers formal education programmes on vocational skills to primary school leavers or those interested with secondary level of education.

APPENDICES

Appendix 1:

Main Census Questionnaire

Statistics Act 2006

Republic of Kenya
Population and Housing Census – 24th/25th August 2009
